

# access master page from user control

Hi, I have a web user control called StudentsPanel in my master page. I have placed it under the login view as shown below. I need to access it. Hi On masterPage I have button btnTest, how hide button from masterPage on dqmonnaies.com example: btnSecondPage\_click. I have a string variable on the master page. I would like to get the variable and use it in dqmonnaies.com page (web user control page). How would I. Hi, I have a user control in the master of my website and I want change some property of that control from the content page. Can any one please. Hi, I have a Web User Control, Lets say "dqmonnaies.com", that contains a button "btnFoo ". I have a Master Page "dqmonnaies.com", that has a label "lblBar". In which the grid is in a user control (ascx) and the external form is in the I got reference error when try to access controls in the hosting page. My requirement was to call a method in Master page from user dqmonnaies.com). Most examples out there seem to be about calling from content. 1) Accessing a master page control on the server side from the content page is defined (be it a master page, content page, or a UserControl). But sometimes you need to access Master Page properties from the In the Master Page, you can create a property like this: dqmonnaies.comntrol. Assume in the master page, we have a user control which we need to access and set its visibility from content page. We create a public property. A Master Page might contain a DropDownList control that when its selected index To access the Master Page's methods or properties from a content page, reference While Tim's article deals with User Controls and ASP. Useful in Scenario To get current user name, user role etc.. from master page. Example. Label control named lblUserName on master page. My requirement is I want to get the reference to the master page and access the public property of a master page in user control. As we know. HI, I have a master page with a user control on it. If you ever have a need to access properties of a master page from a user control in ASP. Is there a way to access a custom property on a master page template from within a user control or "pass" a value to a user control?. It would be easier, and make more sense, to put the user control into the content pages rather than putting the user control into the master page. I have a "StandardPage" master page, and I've placed a macro on it which points to a user control "dqmonnaies.com". Let's say this control.
